

Project Master

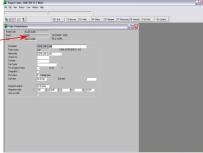

The Project Master module has been developed using the newly award winning Excelerator® Technology. This technology allows the bi-directional, seamless integration of Excel and Sage.

By a click of the mouse, Project records created or amended in Excel update the Sage database with full control and validation that follow the Sage business rules.

The powerful and flexible browse feature allows the user to search the Sage database for valid Project codes and other data whilst working in Excel.

This is done by a simple right click of the mouse on the field to be looked up. The search can be based on a number of fields and can also be used to create conditional criteria for the search.

Fast, efficient and simple to use.

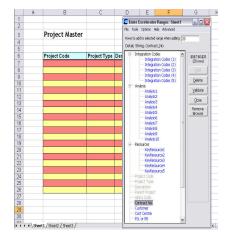

Excelerator has dramatically reduced the data input times and has been a major factor in meeting our tight deadlines at month end.

David Waldren, SITA UK

Project Master

An easy-to-use Spreadsheet Designer is provided to create user-defined spreadsheet formats for data entry and upload to Sage. This can be used as an organisation's standard Project entry form.

The Spreadsheet designer is also used to create project details from existing spreadsheets in an ad-hoc manner or from data from other systems.

A very useful feature of the software is the ability to carry out mass updates of specified Project records such as description, alpha code and integration codes.

Project Master Excelerator® is considered to be the interactive Project Creation and Maintenance software.

The tool has provided highly substantial and significant efficiency improvements by streamlining current business operations.

Key Features

- Upload and download Projects
- Create and amend Project records
- Allow mass
 updates of specified
 Project records e.g.
 description, alpha
 code etc.
- Select Project records based on user defined selection criteria
- Validatebeforepost
