The powerful and flexible browse feature allows the user to search the Sage database for valid service codes and other data whilst working in Excel.

This is done by a simple right click of the mouse on the field to be looked up. The search can be based on a number of fields and can also be used to create conditional criteria for the search.

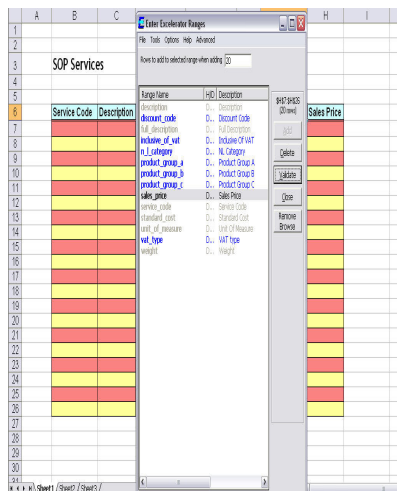

By a click of the mouse, SOP Services records created or amended in Excel update the Sage database with full control and validation that follow the Sage business rules.

“Going forward with Excelerator made a big difference to our finance team, a good product that’s so easy to use!”

SOP Services

An easy-to-use Spreadsheet Designer is provided to create user-defined spreadsheet formats for data entry and upload to Sage. This can be used as an organisation's standard SOP Services entry form.

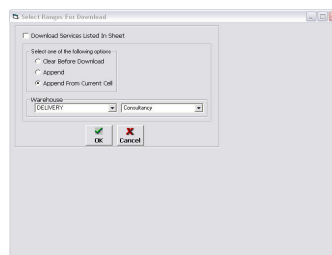

The Spreadsheet designer is also used to create Services from existing spreadsheets in an ad-hoc manner or from data from other systems.

A very useful feature of the software is the ability to carry out mass updates of specified Service records such as costing, pricing and preferred supplier.

Sales Order Processing Services Excelerator® is considered to be the interactive SOP Services Creation and Maintenance software.
