The powerful and flexible browse feature allows the user to search the Sage database for valid posting codes and other data whilst working in Excel.

By a click of the mouse, cash and allocations created or amended in Excel update the Sage database with full control and validation that follow the Sage business rules.

This is done by a simple right click of the mouse on the field to be looked up. The search can be based on a number of fields and can also be used to create conditional criteria for the search.

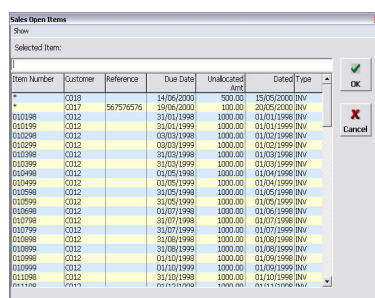

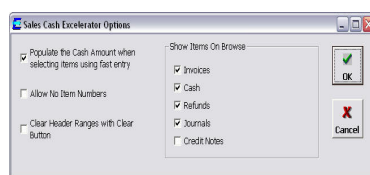

The ease-of-use and flexibility offered by our Excelerators significantly enhance the functionality of Sage and offers a practical tool to interface with other applications.
