Current purchase: 00000000

The powerful and flexible browse feature allows the user to search the Sage database for valid supplier codes and other data whilst working in Excel.

By a click of the mouse, Supplier records created or amended in Excel update the Sage database with full control and validation that follow the Sage business rules.

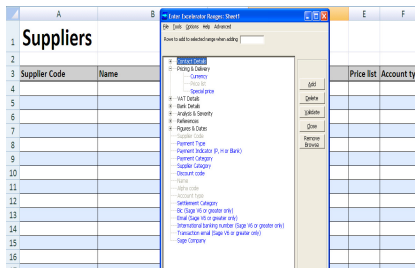

This is done by a simple right click of the mouse on the field to be looked up. The search can be based on a number of fields and can also be used to create conditional criteria for the search.

Fast, efficient, simple to use and covers a broad range of business modules, what more could you ask for, Excelerator it's a must have!

Richard Clark,
Delta Impact

Suppliers

An easy-to-use Spreadsheet Designer is provided to create user-defined spreadsheet formats for data entry and upload to Sage. This can be used as an organisation's standard Supplier entry form.

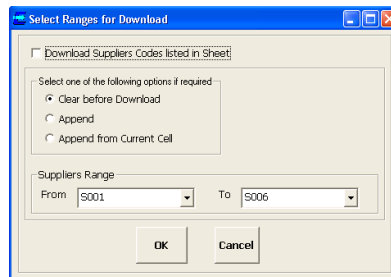

The Spreadsheet designer is also used to create supplier details from existing spreadsheets in an ad-hoc manner or from data from other systems.

A very useful feature of the software is the ability to carry out mass inserts and mass updates of specified Supplier records such as price list code, analysis codes and territory code.

Suppliers Excelerator® is considered to be the interactive Supplier Creation and Maintenance software.
